```python
In [ ]:  from __future__ import print_function
         if __name__ == '__main__':
             from pyspark.sql import SparkSession
             spark = SparkSession.builder \
                 .master("local") \
                 .appName("Word Count") \
                 .config("spark.some.config.option", "some-value") \
                 .getOrCreate()

             print(spark.range(5000).where("id > 500").selectExpr("sum(id)").col
```

how to run spark app

save above to a file called spark-test.py

```
$ python spark-test.py
```

or

```
$ pyspark spark-test.py
```

or

```
$ spark-submit spark-test.py
```

```python
In [ ]:  # COMMAND ----------

         from pyspark import SparkConf
         conf = SparkConf()\
             .setMaster("local[2]")\
             .setAppName("DefinitiveGuide")\
             .set("some.conf", "to.some.value")

         # COMMAND ----------
```
